

Case Study:

## Education Establishments

Customer:

College

### Overview

Split across several sites, and with very similar demands and limitations as our university partner, Quadratek has been the preferred data installer of a large London college since 2013.

#### Our challenge

To install Cat5e network outlets in a number of lecture theatres across all 11 floors of a campus building to facilitate a new CCTV system.

#### What we did

Using existing cable basket throughout the corridors where possible, with new containment installed where required, the cables were terminated using new Nexans modular components and fixed to ceiling slabs as single outlets.

Within the network equipment cabinets, all cables were terminated onto existing and new Cat5e patch panels.

#### The result

The project was completed on time and on budget meeting the customers exacting standards

Installation of CCTV cables in several lecture theatres across an 11-floor building
