Private School

Overview

Following a successful tender, Quadratek was selected to be the preferred data specialist for a 300 year old all-girls private school in the Home Counties. With the motto “Hope Favours the Bold” the girls are taught to be courageous, hopeful, optimistic and determined.

Our challenge

Design a new IT data infrastructure solution scalable to meet both current and future needs and implement within tight timescales during a term-time holiday.

What we did

Working closely with the electrical contractors who were responsible for installation of all containment, Quadratek provisioned an infrastructure solution within the new senior school extension consisting of 263 Cat5e, 2 x fibre optic cables, 2 x voice cables and a satellite cabinet ensuring it was scalable for future growth.

The result

Since the initial engagement, Quadratek has completed a number of tasks ranging from laying cross-site fibre optic cable between the senior and junior schools, repairing damaged fibre optic links at short notice, to completing networks that included new cabinet, backbone fibre and Cat6 horizontal cabling and associated containment.

All installations were tested to current standards with results offered to the client for scrutiny.

Imperative to work closely with all other trades
