

Case Study:

Quadratek boosts credentials with OHSAS 18001 & ISO 27001 certification and RoSPA Silver Award

Overview

Quadratek, one of the UK's leading providers of IT services and expertise, has received the OHSAS 18001 and ISO 27001 certifications.

Boosting our credentials

OHSAS 18001 is the international occupational health and safety management system specification.

ISO 27001 covers the management of information security. It demands high standards of information security risk assessment and data protection expertise. Holders of ISO 27001 are reassessed every 12 months.

In a further development, Quadratek received the RoSPA Silver Award in November 2017 in recognition of its health and safety management system.

Speaking of the recently acquired certifications, Simon Randall, director at Quadratek, said: “Safety and security matter more than ever in our work these days – and we take both disciplines very seriously. We’re delighted that our commitment to health and safety has been recognised by OHSAS 18001 certification and the RoSPA Silver Award. Similarly, as a business with a major presence in the defence sector and other industries reliant on the security of data, Quadratek can assure clients across the world of best practice data security management.”

The new – and renewed – certifications reinforce an impressive list of safety accreditations held by Quadratek. The company is accredited within the Contractors Health and Safety Assessment Scheme (CHAS) and holds a SafeContractor certificate for IT infrastructure & network cabling installations. All members of the Quadratek management team are IOSH Managing Safely qualified.

Established in 1997, Quadratek offers a seamless IT service through nine core competencies:

- systems and support
- hardware break fix
- structured cabling
- professional services
- fibre optic cabling
- recruitment
- Wi-Fi
- asset disposal
- data centres

Safety and security matter more than ever in our work these days – and we take both disciplines very seriously

The company serves clients in a wide range of industries, from defence to publishing, from finance to central and local government. All Quadratek engineers are SC (Security Check) cleared and, where applicable, its installation engineers are CSCS (Construction Skills Certification Scheme) cardholders.
