

**Case Study:**  
Network Remediation

**Customer:**  
Capita/ElectraNet - MoD

## Overview

Quadraturetek was appointed by ElectraNet UK Ltd to support Aramark, the catering and facilities provider for the Ministry of Defence, in delivering new and upgraded network connections for EPOS (Electronic Point of Sale) systems across multiple MoD sites.

The programme ensured Aramark's catering operations were supported by secure, compliant, and resilient ICT infrastructure across a range of high security environments

## Scope

We provided SC cleared engineers and electricians to install, remediate, and test structured cabling and electrical systems in accordance with JSP453 ICT Standards.

Works were carried out across:

- Regents Park Barracks, London
- Invicta Park Barracks, Maidstone
- Royal College of Defence Studies, London
- Whitehall, London

All tasks were coordinated with ElectraNet's site teams and Aramark operations to minimise disruption to daily catering services.

## Delivery and Challenges

Operating within live MoD facilities required strict adherence to access procedures, security protocols, and health and safety requirements. Our defence experienced team ensured efficient delivery, maintaining full compliance with JSP453 standards and completing the works to a high professional standard within agreed timescales

## Conclusion

The completed project provided Aramark with fully compliant and dependable network infrastructure, enabling seamless operation of new EPOS systems and improving service reliability across all sites.
